Professional Experience

SAP Canada Inc.

DevOps Engineer Team Lead

Vancouver, Canada

January 2025 - Present

- Led the delivery of end-to-end cloud provisioning pipelines that generated \$7M+ in organizational revenue, enabling the commercialization of 250+ customer sandboxes across Premium and Base tiers.
- Drove the implementation of a scalable, region-ready architecture, isolated databases, enhanced FinOps governance, and advanced self-service configuration. Accelerating customer adoption and advancing the roadmap toward fully automated Cloud Infrastructure provisioning.
- Successful delivery of 300+ environments migration from the Fieldglass legacy data center to the SAP hyperscaler cloud landscape was achieved, marking a significant milestone in modernizing our infrastructure. This effort enhanced system scalability, reliability, and performance while aligning with the organization's cloud-first strategy for future growth and innovation.
- Enhanced Engineering Team proficiency by implementing a targeted upskilling initiative in critical DevOps domains (Kubernetes troubleshooting, automated deployment, and infrastructure management), reducing ticket resolution time by 75% and enabling timely delivery of high-priority backlog items.
- Delivered a foundational Observability layer by rolling out Dynatrace in Non-Production and Staging environments, empowering engineering teams with deep visibility for faster, data-driven insights.

SAP America Inc.

DevOps Engineer

New York, USA

June 2021 - December 2024

- Maintains and manages of 1,000+ virtual machines, ensuring consistent performance and reliability to meet client requirements. This includes administering hybrid cloud IaaS and PaaS infrastructures, as well as managing code version control for applications.
- Actively working in improving the continuous integration/continuous delivery (CI/CD) pipelines to streamline code deployment, automate testing, and ensure faster release cycles.
- Led 2 key projects to implement centralized JIRA and ServiceNow process flow systems within the SAP IT organization, significantly enhancing organization operation efficiency and streamlining IT audit activities.
- Managed scalable, secure, and resilient cloud environments on platforms such as Azure, SAP On-Premise Data Center, and Google Cloud, optimizing cost and performance while ensuring high availability and disaster recovery.
- Developed and refined IT incident management processes, incorporating automation tools and best practices to streamline workflows, reduce response times, and enhance operational efficiency.

British American Tobacco

IT Business Analyst Intern

East Java, Indonesia

July 2020 - January 2021

- Served as an IT Project Delivery Manager (Product Owner) in a Data Warehouse Modernization project including managed and assigned backlogs (Feature, User Story, Task) in Azure DevOps to 50+ team members.
- Implemented Enterprise Data Platform to the end market in Indonesia using Power BI solutioning that automates 10,000+ manual working man-hours to drive consistency, efficiency, and adhere to the global BAT visions.
- Continuously engaged with the contracted vendor & global teams to make sure the data lake infrastructure architecture is developed properly including data acquisition, data ingestion, data orchestration and data provisioning using Microsoft Azure, SFTP tools, Wherescape, Kafka, Snowflake, and Power BI technologies.
- Delivered Power BI visualization training to the 30+ people to enable the Citizen Data Analyst that embedded in the organization.
- Worked closely with stakeholders from various departments to analyze and gather business requirements and making sure that 20 + data sources are captured including SAP, survey companies, B2B platform, and manual research data.
- Reported and monitored the project progress, team health, and any possible risk to the leadership team by using Agility Health Tool and Azure DevOps by following standard project agile governance.

IQ4

Cyber Threat Analyst Intern

New York, USA

January 2020 - February 2020

- Analyzed cybersecurity incidents across fraud, sabotage, IP theft, and espionage, applying NIST and NICE frameworks to strengthen threat detection, response, and recovery while supporting executive-level communication.
